

Vibemac at Texprocess Americas Business in Americas Gains Momentum

Vibemac booth at Texprocess Americas (Atlanta, U.S.A. from April 24 to 26) received a large number of prospective customers from Central and South American countries such as Mexico, Guatemala, Honduras, Nicaragua, Colombia and Venezuela as well as the U.S.A.

At the booth, details of the flexible production with Vibemac machine were presented and explained. Vibemac's pocket setter features a smaller design than other companies' models, a high flexibility and a minimum setup time at the time of product exchange. What is needed by users? Improved throughput and product quality by use of production equipment. Plus, quick supply of spare parts. Such requirements can be EASILY and QUICKLY met by Vibemac.

Mr. Simone Bianchi is directing business as the sales division manager covering the Central and South American countries. He is pondering setup of a sales and service office in Central America in near future. During the show, not only users, but also dealers and distributors in the respective regions visited the Vibemac booth and talked business with Vibemac. Kiko Sewing Machine is a Vibemac's dealer that is located in Los Angeles, U.S.A. and has a sales territory of North America. From Kiko, Mr. Mike attended this show.

Introduced below are the latest sewing machine models exhibited by Vibemac.

- V100H, a fully automatic creaser and the 2516V4, the first patented double colour back pocket setter (DCT - Double Colour Technology). Maybe these two units together are well known by the nickname the customers liked to give them: The Back Pocket Station, as these two machines actually work as a unique single station: the same operator can crease and attach the back pocket basically by pushing two buttons!
- The third unit is equally famous

Vibemac at Texprocess Americas

since its first model (the 1650 version) has been the first Automatic Loop Setter which appeared in the market. We're talking about the 4650EV7PR Loop Setter, the ViBeMac workhorse. Benefits and features of this amazing unit have been shown during the Exhibition to the visitors who didn't yet know this amazing machine.

- Fourth one is the New ViBeMac feed off the arm: the 2262HP. This NEW Feed off arm unit is a unique and authentic piece of art and technology, which runs at 3500rpm.

Compared to the previous model, (the H one), which anyway was already the best FoA in the market, the HP version has been upgraded and improved with a complete new patented DCP (Dynamic Control of the Pressure on the presser foot). Thanks to this amazing device, the machine automatically increase/reduce speed/pressure on thicker part of the fabric, the crotch precisely. This way operator has basically to do nothing but feed the machine and push his foot all the way down during the whole operation. Final result will let you breathless, full speed, perfect quality!!!

- The last but not the least, the bottom hemming unit

named 3022 BHE. The advantages of this machine are many, but the most important one is that this machine can be converted from chain stitch to lock stitch just changing some parts, therefore no need to purchase any new unit. Besides, stitch length can be adjusted electronically, no need to change any gears or any other part! All these benefits are fulfilled with the smallest cylinder arm in the market, which allows to seam bottoms of men's, women's and kids' wear! Speed of lock stitch version: 3500rpm Speed of chain stitch version: 4000 rpm!
