ViBeMac at Texprocess Americas in Atlanta, U.S.A.

After the past successful editions of Texprocess, ViBeMac couldn't miss this 4th edition which is going to be held in Atlanta, USA, from 13th to 15th May 2014. The Italian automatic sewing machines brand will be present with its own booth, and will show 6 of its key units.

The first two units on display inside ViBeMac booth need no introduction: model V100HA, a fully automatic creaser and model 2516 V4 DCT, the worldwide first patented double color back pocket setter (DCT - Double Color Technology), 2 needles to stitch double color threads in one single sewing cycle. These two units together are well known as Back Pocket Station, because these two machines actually work as a unique single station: the same operator can crease and attach the back pocket basically by pushing two buttons! In the bargain the great advantage is that two operators are able to manage one V100HA at the same time as they operate two 2516V4 pocket setters, granting an average productivity of 2000 perfectly folded and applied pockets in an 8 hour shift.

The third unit is equally famous since the first model, the 1650 version, i. e. the very first Automatic Loop Setter which appeared in the market. We're talking about the 4650EV7RR Loop Setter, ViBeMac latest product. Better than its predecessor (EV7PR) under each and every aspect, and equipped with a completely redesigned graphic panel, new presser foot, new wiper, new cutting and suction device, this unit is much more efficient. These and many more amazing features will be shown during the Exhibition to the visitors who don't yet know this innovative machine.

Fourth one is the V701, an automatic pocket hemming unit so far unparalleled in the market. This unit is reliable, precise and accurate in the seam, and it has a sewing speed of 2400rpm, the highest speed for a lock

stitch unit! Its unique and wide range of needle gauges available makes the V701 unbelievably flexible. There won't be no more wave effects or arching of the pocket hem problems thanks to the innovative pneumatic transport system, that permits to hem any kind of fabric thickness or pocket

dimension, plus an adjustable folder to satisfy every fashion need. At the end of the transport belt, an un-loader automatically stacks the pockets properly on the storage disk.

Fifth one is the ViBeMac waistband unit: the 3022WB201, that can stitch a waistband onto jeans, casual trousers and denim jackets. This unit is equipped with a sewing head entirely developed by ViBeMac R&D department; model 3022WB201 combines drop feed & needle feed transport systems, that allows to use the unit with the piece by piece working method. The 3022WB201 boasts also a soft belt puller exclusive device to avoid all the skip stitches after the foot lifter. Final result will leave you breathless thanks to full speed and perfect quality. The unit can be supplied for both chainstitch and lockstitch types of sewing; the two types of stitches can be mixed as desired in the model FLX (patented system unique worldwide).

2262HP

Last but not least, the 2262HP, ViBeMac reverse feed of the arm. This unit is a unique and authentic piece of art and technology, which runs at 4000 rpm. Compared to the previous model, the 2261H, this HP version has been upgraded and improved with a complete new patented DPC (Dynamic Pressure Control) on the presser foot. Thanks to this amazing device, the machine automatically increases/reduces speed/pressure on the thicker part of the fabric, i. e. on the crotch. This way the operator has basically to do nothing but to feed the machine and push his foot all the way down during the whole operation. This DCP provides a really perfect quality.

ViBeMac staff will be pleased to

attend you during the exhibition at booth #4027, and to give further details and explanations to each guest that will express interest and curiosity about ViBeMac world.
