## Vi.Be.Mac at Texprocess Americas

The second edition of Texprocess Americas, the largest North American trade fair for the Equipment and Technology for the Development, Sourcing and Production of Sewn Products, took place in Atlanta at the Georgia World Congress Center, May 13 – 15, 2014.

For Vi.Be.Mac the trade show has been a huge success. Although Vi.Be.Mac is a very well known brand in the sewing branch, Texprocess is always a great opportunity to make the Americas more aware of Vi.Be.Mac. technology. Given that 90% of the Company business is carried out outside Italy, it has been very useful to attend Texprocess, to record many interesting contacts and to show to every Visitor the innovation that Vi.Be.Mac. is always ready to propose in the market.

Throughout the show session, the booth has been crowded with dealers, distributors and end users from all around the world. Vi.Be.Mac's staff had also the pleasure to host some of the most remarkable names of the sewing industry.

Under a 35 years achievement, Vi.Be.Mac. has solidified mutual trust with the users and has supplied new merchandise responding to the users'needs.

This event has been a very important opportunity for Vi.Be.Mac. to show directly to the Visitors by means of technical demonstrations, the reliability and the flexibility of its key units, together with the unique know-how, grown through the thirty year experience.

The completely new stand, designed especially for the event, hosted six of the Vi.Be.Mac's key unit: the 2516V4DCT, the worldwide first patented double color system back pocket setter (DCT - Double Color Technology), 2 needles to stitch double color threads in one single sewing cycle and the V100HA, a double head fully automatic pocket creasing unit. These two units together are well known as Back Pocket Station, because these two machines actually work as a unique single station. Also, the 4650EV7RR, the very innovative latest Vi.Be.Mac. Automatic loop setter unit and the automatic pocket hemming unit V701. Finally the 3022WB201, automatic waistband unit piece by piece and the 2262HP, 3 needle reverse lap feed of the arm unit.

It is possible to assert that, compared to the past edition, the flow of visitors at Vi.Be.Mac.'s booth is increased. A crowded booth on all three days and the consistently positive feedback of the many dealers and sales partners from all around the world confirm the Company's consolidate leading position in the market and reflect the high quality of its proposals. For the next edition the wish is to keep or even increase this trend.
