MAY 2016

Vi.Be.Mac.'s Bottom Hemming Units 3022BHE-C & 3022BHE-L

Vi.Be.Mac. is proud to present a big achievement in its range of machines, entirely designed and manufactured in its own factory. The 3022 BHE (C = chain / L = lock) represents the market's solution to trouser hemline problems: accurate, productive and characterised by the flexibility that has become the hallmark of all Vi.Be.Mac. products.

The advantages of this machine are many, but the most important one is that this machine, besides performing standard operations, is suitable to work easily on small sizes (women's and kid's wear), thanks to the smallest cylinder arm available in the market.

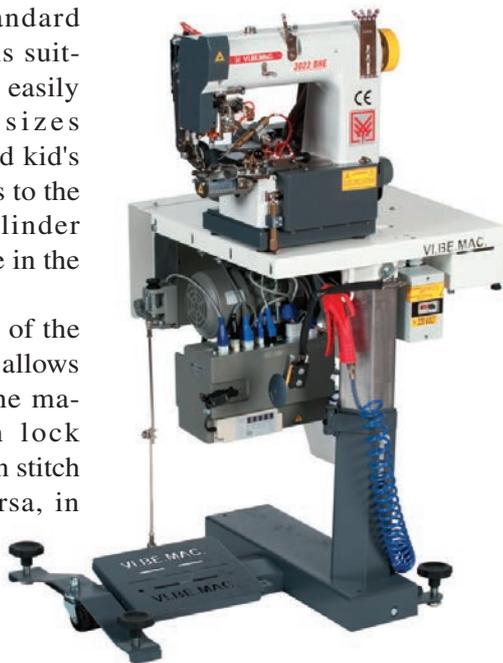

The design of the sewing head allows to convert the machine from lock stitch to chain stitch and vice-versa, in case of changes of style, no need to purchase a new machine, but just purchasing some parts

and couple of hours of work you will be ready to start sewing your new style. Thanks to special innovative hemming device it is possible to work outside or inside out, only replacing the folder. Reverse side stitching device can be purchased separately. The stitch length setting is electronic thus easier, faster and adjustable in a matter of few seconds. The puller system, a Vi.Be.Mac. invention, is composed by a lower roller feeder with an extremely powerful, patented upper puller, that easily handles the more delicate operations like crossovers or lap felling, especially with heavy fabrics. A king size capacity rotating hook permits to reduce the loss of time, due to the need of changing the bobbin.

If all these amazing features have affected you, please do not hesitate to contact VBM at the address sales@vbm-grp.com, or please contact the local branches at the address sales@vbm-in.com (India), sales@vbm-ae.com (UAE), sales@vbm-eg.com (Egypt), sales@vbm-bd.com (Bangladesh) or sales@vbm-mx.com (Mexico).

To get more infos about Vi.Be.Mac. units, please visit our website www.vibemac.com, or check our youtube channel www.youtube.com/VIBEMACSpa, in order to see the machines at work in a real production line.
