TEXPROCESS UNITS:

V300-1LS

Automatic continuous waistband unit

4650 EV9@UP2

Automatic belt loop setter

Vinco VC900

Loading & unloading automation for eyelet unit

2516V4 DCT

Automatic back pocket setter

1010V4DCS

Automatic back pocket decorative unit

Vinco VC101HAM

Pocket creasing unit

V700L

Automatic pocket hemming unit 2CS

2261HP

Feed of the arm unit

3022BHE

Bottom hemming unit

V364.1

Flap bed lap felling unit

V800AS

Automatic side seam sergin unit

VBM GROUP @ TEXPROCESS 2017, HALL 5.1, BOOTH B30

Vbm Group will be present at one of the largest garment manufacturing and textile processing trade exhibition, Texprocess Frankfurt to display its unique technology.

Don't miss the opportunity to meet the whole worldwide VBM team at Hall 5.1 Booth B30 to enjoy together this great event. So many news are waiting for you!

Vbm is proud to present a big achievement in its range of machines, entirely designed and manufactured in its own factory. The 3022BHE represents the market's solution to trouser hemline problems: accurate, productive and characterised by the flexibility that has become the hallmark of all Vi.Be.Mac. products. **NEWS: now the machine can perform chainstitch and lockstitch with the conversion kit supplied!**

The advantages of this machine are many, but the most important one is that this machine, besides performing standard operations, is suitable to work easily on small sizes (women's and kid's wear), thanks to the smallest cylinder arm available in the market.

The design of the sewing head allows to convert the machine from lockstitch to chainstitch and vice-versa. In case of changes of style there's no need to purchase a new machine or new parts!! **The conversion kit is supplied**, and just with few time of work you will be ready to start sewing your new style. Thanks to special innovative hemming device it is possible to work outside or inside out, only replacing the folder. **Reverse side stitching device is also supplied along with the machine!** The stitch length setting is electronic thus easier, faster and adjustable in a matter of few seconds. The puller system, a Vi.Be.Mac. invention, is composed by a lower roller feeder with an extremely powerful, patented upper puller, that easily handles the

more delicate operations like cross-overs or lap felling, especially with heavy fabrics. A king size capacity rotating hook permits to reduce the loss of time due to the need of changing the bobbin. Plus, this unit is a clear example of Vibemac flexibility value, making it possible to change from light to heavy fabric without any alteration to mechanical components or electronic adjustments. With programmable condensed stitch, the resistance of the seam while washing is always guaranteed.

Also, the V364.1 is a flat bed machine equipped with Vi.Be.Mac. sewing head, 2 or 3 needle (3 needle only with 1/2" needle gauge) chain stitch, needle feed and automatic lubrication. Ideal for lap felling of the yoke seams, rise seams, inseam & outseam, top stitch. This model ensures user-friendliness, high-quality sewing, production and reduced maintenance expenses. The machine soft belt puller device, the revolutionary presser foot equipped with DCP technology (Dynamic Control of the Pressure on the presser foot) and the useful table that comes already assembled with the machine make of this unit a very functional working station.

At Texprocess you will find also very interesting machines like: V700L back pocket hemmer, 1010V4DCS automatic pocket decorative unit, 2516V4 automatic back pocket setter, VC101HAM pocket creaser, 2261HP feed of the arm, V300-1LS waistband unit, 4650EV9@UP2 belt loop setter, V800AS side seam serging unit, 3022BHE bottom hemming unit, VC900 automation for eyelet unit. Do not hesitate to contact VBM for any enquiry at the address sales@vbm-grp.com, or please contact vbm local branches @ the addresses: sales@vbm-ae.com (UAE) | sales@vbm-bd.com
